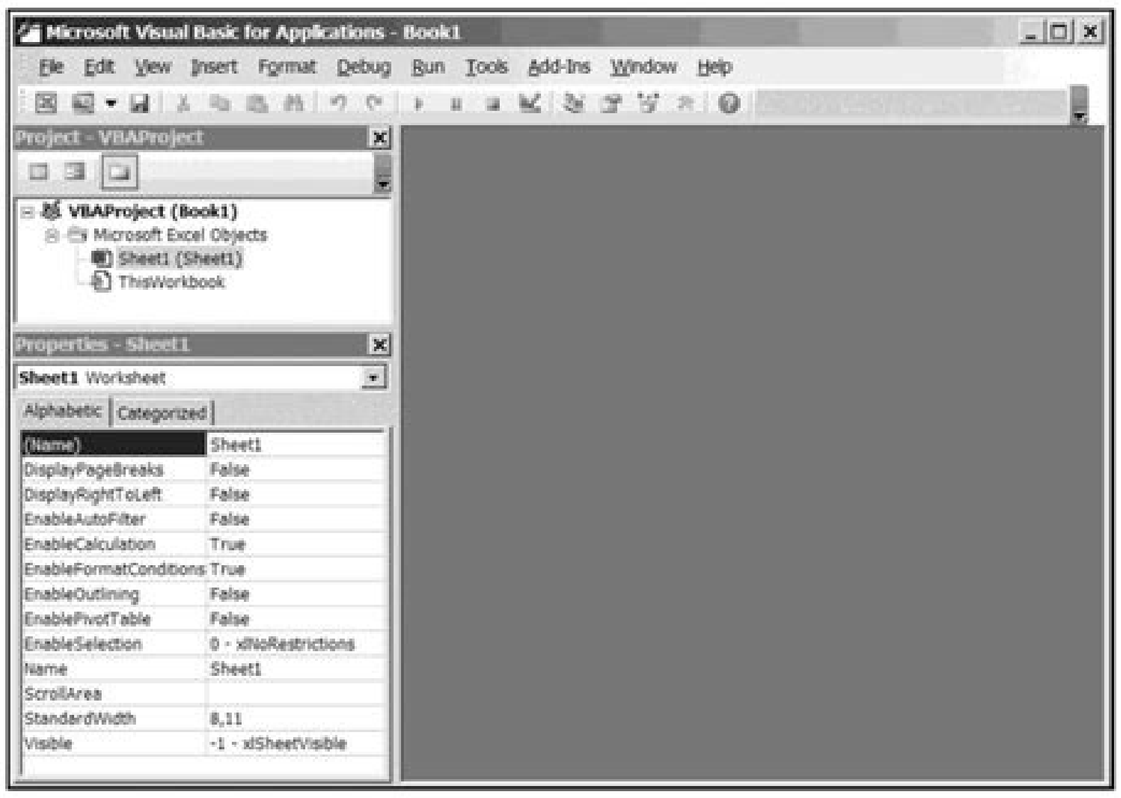

Fig. 1.1. The Visual Basic Environment window including the standard toolbar, the project explorer window and the properties window

Let us consider the toolbars.

1. Toolbar *Standard* is displayed by default. It allows us to perform a wide spectrum of actions.

This toolbar is usually located under the menu bar, however, we can move it to other areas of the VB window by using the mouse.

2. Toolbar *Edit* is intended for work with the program text. It realizes possibilities of an elementary text editor:

- copying and moving a text fragment to Windows Clipboard;
- inserting the text fragment from Windows Clipboard;
- search and replacement of words and phrases, etc.

3. Toolbar *Debug* is intended for debugging the program. Many provisions are made for debugging:

- observation of the current values of the program variables;
- step-by-step program execution, in which one operator (statement, instruction) or its part is performed on each step, etc.
